

Prathamesh Salunke

p.salunke@somaiya.edu | (+91) 8625095223

Profile Summary

Highly enthusiastic IT engineering undergraduate with a passion for implementing and launching new projects. Possessing a solid foundation in computer science fundamentals, programming languages, and software development methodologies. Eager to apply academic knowledge and practical skills gained through coursework and personal projects to contribute effectively to a dynamic IT team as an intern.

EDUCATION

- ❖ Pursuing IT Engg. 3rd year from K.J.Somaiya College of Engineering, Vidyavihar
- ❖ X(SSC)|S.P.A Madhyamic Vidyalaya 94.80% | 2020
- ❖ XII(HSC) | C.H.M College 68% |2022

SKILLS

- ❖ Programming languages- Java , C , C++
- ❖ Frontend- HTML, CSS, Javascript , React.js
- ❖ Backend- PHP,Flask
- ❖ Database management -MySQL , SQL
- ❖ Interpersonal skills-Time management , Teamwork , Adaptability

EXPERIENCE

Frontend developer| Inhouse internship

I worked as a frontend developer on the 'Faculty Academic Curator' project which involved developing a website for faculty members at our college. The website was designed to track their tasks, facilitate duty swapping, and calculate remunerations for completed work .

ACADEMIC PROJECTS

QuizMe : Php(Backend) , Mysql(Database)

- Developed an interactive quiz application with user authentication and interest-based quiz selection.
- Implemented a **leaderboard** that updates scores dynamically, replacing previous scores only if a user achieves a higher score.
- Integrated **PHP Mailer** for sending and managing friend requests between users.
- Enabled profile updates, allowing users to modify personal details seamlessly.

Air Quality Prediction using Random Forest

- Developed a machine learning model using Random Forest to predict Air Quality Index (AQI) and pollutant concentrations.
- Implemented both regression (e.g., predicting CO/NO₂ levels) and classification (e.g., high vs low pollution levels) tasks.
- Utilized environmental features such as temperature, humidity, CO, and NO₂ for predictive modeling.
- Showcased the robustness of Random Forest in handling noisy and small datasets, maintaining high accuracy.
- Employed data preprocessing techniques including data cleaning, feature selection, and normalization.
- Validated model performance using cross-validation and error metrics (e.g., RMSE for regression, accuracy for classification).

Full-Stack Learning Management System (LMS) – Udemy Clone (MERN Stack)

- Developed a full-stack LMS platform similar to Udemy, enabling educators to publish courses and students to enroll and watch content.
- Implemented secure user authentication for account management and access control.
- Integrated Stripe payment gateway for seamless course purchases and revenue distribution.

Smart Itinerary Generator

React | Tailwind CSS | Flask | MySQL

- Developed an intelligent itinerary planning application that dynamically generates personalized travel plans based on user preferences, budget constraints, and live weather conditions.
- Integrated APIs for real-time weather data, location-based photos, and **Google's Gemini API** to enhance trip recommendations and user experience.
- Built a responsive and intuitive frontend using React and Tailwind CSS, ensuring seamless user interaction across devices.
- Designed a scalable Flask backend connected to a MySQL database to manage user profiles, preferences, and trip history efficiently.
- Implemented logic to adapt itineraries dynamically, adjusting activities and recommendations according to current weather updates and user inputs.

Certificates

- ❖ **Complete web development - Udemy**
- ❖ **Getting started with Git and Github- Coursera**

March 2024
